# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

The low pressure trough that moved over the region late yesterday will be in place through Saturday. The first wave of precipitation produced wetting rain over most of the region, over 2 inches in far Northwest California and 0.50-1.00 inches as far south as the hills in Sonoma and Napa counties in the west and Lake Tahoe in the east. Snow levels dropped to 4000 ft. in the north and 5500 ft. in the south overnight. Showers will continue in the mountains today, and another wave of lighter rain will move through far Northwest California on Saturday.

A significant warming and drying trend is expected to begin late this weekend and lasting through next week. Periods of light N-NE/Offshore winds are possible with this pattern, but no significantly strong winds are expected.

## **SOUTHERN CALIFORNIA**

\*\*\*Strong north winds across Santa Barbara County and the Grapevine tonight into Saturday morning\*\*\*

A Pacific trough will bring westerly winds of 20 to 40 mph with gusts to 60 mph across the wind prone mountain and desert areas through this afternoon. This trough will also bring scattered showers away from the deserts with less than a quarter inch of additional rainfall through this afternoon. Temperatures will be 10 to 20 degrees below normal today, with mid 40s to mid 50s across the mountains and mid 60s to mid 70s in the valleys. Minimum humidity will be mainly above 30% away from the deserts. A strong ridge of high pressure will build into California from the southwest bringing significant warming and drying to the region Saturday through early next week. Temperatures will warm to the 90s across the coastal and valley areas of Southern California on Sunday and be above 100 degrees early next week. Minimum humidity will be in the teens this weekend and then drop into the single digits early next week. North winds of 20 to 40 mph with gusts to 60 mph will surface across much of Santa Barbara County and the Grapevine this evening into Saturday morning. There will be northeast to east winds of 15 to 30 mph with gusts to 50 mph across the mountains and below the canyons and passes of Southern California Monday morning through Tuesday afternoon. The strong ridge of high pressure will weaken, bringing cooler temperatures and an increase in humidity Wednesday through the end of next week.

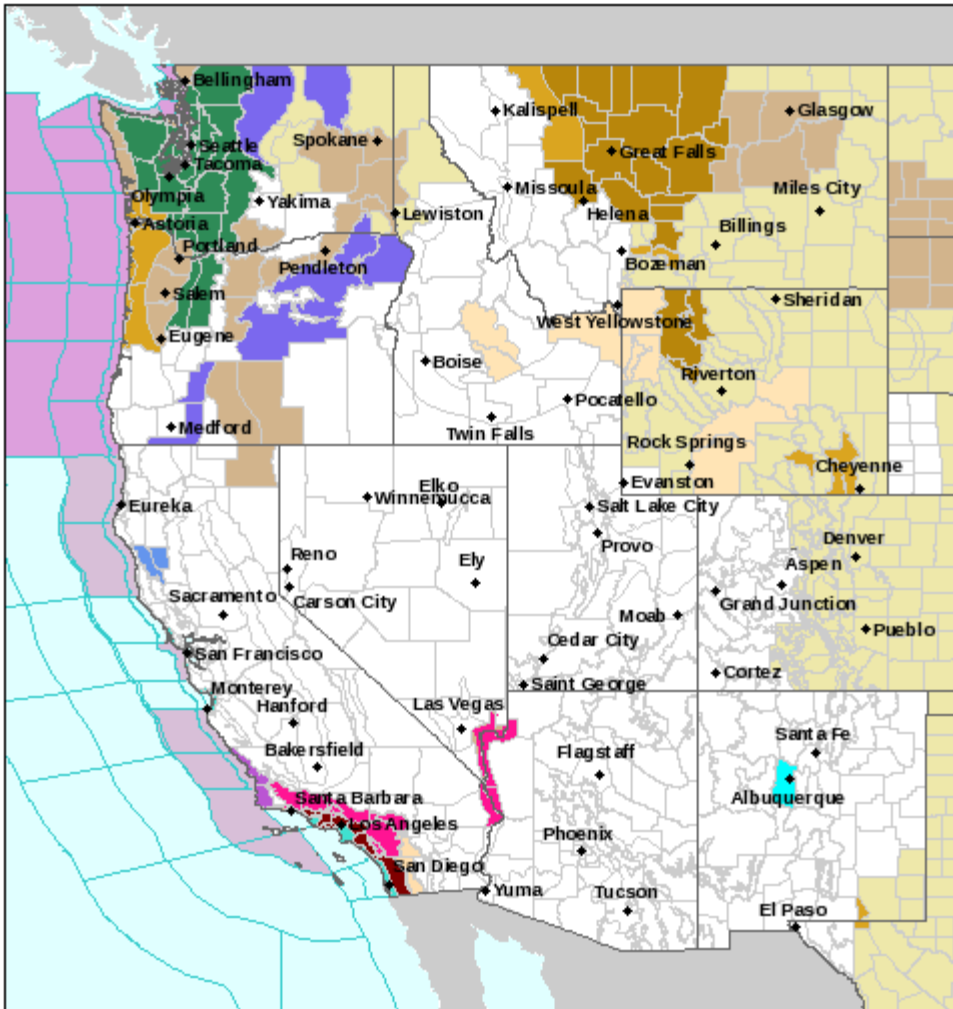

### **Fuels/Fire Potential:**

Cool temperatures and high humidity will cause the potential for large fire to remain low today. There will be an elevated threat for large fire across Santa Barbara County and the Grapevine tonight into Saturday morning due to strong north winds. Rapid rates of spread and long range spotting will be likely if an ignition were to occur in one of these windy areas. Much of Southern California will see a high risk for large fire Monday and Tuesday as gusty offshore winds combine with single digit humidity and record high temperatures. Extreme fire behavior will be likely if a new ignition occurs in a windy area early next week. Any fire that gets beyond its initial attack phase this weekend through early next week will burn actively at night due to poor humidity recovery. Expect light initial attack activity through Sunday and then moderate to heavy IA activity early next week.
